

Prevent losses. Promote sales.

VisionmaX with exclusive Xposure technology deters troublemakers, displays ads

VisionmaX™ makes it clear you're using video surveillance. Its built-in UltraView™ camera uses GE's exclusive Xposure™ technology that adjusts the exposure time for each pixel in the image. Xposure knocks out shadows, glare, reflections and backlighting to capture clear, detailed pictures in any light. What's more, you can program VisionmaX so it also displays multimedia images. That means you can tell potential troublemakers they're being watched—preventing losses—while greeting customers with ads and promotions—boosting sales.
